PREMIUM ACOUSTIC DRUM MODULE

XFL

 *fxpansion*

BFD XFL INSTALLATION GUIDE

Welcome! The data on the *BFD XFL* DVDs is arranged into full kits with auxiliary Kit-Pieces. You can run installers which copy all the data for each DVD. Alternatively, if you only wish to install certain Kit-Pieces, you can drag and drop individual Kit-Pieces from the DVDs to your **BFD/Data** folder. If you are using this manual method, then it is inadvisable to use the pre-made kit definitions provided on each DVD as they may reference Kit-Pieces which you have not installed. Instead, you should compile your own kits using the individual Kit-Pieces (which, as you know as a *BFD* user, is a breeze to do).

You should also make sure that you have the latest version of *BFD* installed. To get the latest version, please register, then fill out the form on the following page:
<http://www.fxansion.com/product-bfd-main.php>

Using the Installers:

On Windows, insert DVD1 and run the **Win BFD XFL Setup.exe** file and follow the on-screen instructions. Ensure that the install location is your existing **BFD** folder. You will be prompted for further DVDs depending on the options you select.

On MacOSX, each of the 5 DVDs has an installer named **MacOSX BFD XFL Setup N.mpkg**, where *N* is the number of the DVD (for example, **MacOSX BFD XFL Setup 1.mpkg** for DVD1). Simply run the installer and follow the on-screen instructions, making sure you select the install location as your existing **BFD** folder.

Using the Manual Copy method:

Each DVD has Kit-Pieces arranged inside the **BFD/Data** folder, arranged by manufacturer. Simply drag and drop one or more of these manufacturer folders to your **BFD/Data** folder. If you only want certain Kit-Pieces within a manufacturer folder, you will need to create the manufacturer folder manually, then copy

the desired sub-directories over to it. Alternatively, you can copy the whole manufacturer folder, and delete the parts you don't need. If in any doubt, make sure the directory structure in your hard disk's **BFD** folder matches that on the DVDs.

When you next launch *BFD*, the newly-copied *BFD XFL* Kit-Pieces will be available to you within the **Kit-Piece Selector** panels.

Again, you will need to compile your own kits if you choose to install *BFD XFL* Kit-Pieces selectively in this way.

SOME NOTES ON THE NEW KIT-PIECES

BFD XFL contains some new types of Kit-Pieces.

Kit-based Percussion

BFD XFL includes cowbells, jamblocks, tambourines, handclaps and fingersnaps (please note: because identical microphones, gain and other studio settings were used as all the other Kit-Pieces, the claps and snaps can seem rather quiet). These can be found in the Cymbal **Kit-Piece Selector** panels.

Hyper-detailed Hihats

Included are hihats with $\frac{1}{4}$ -open and $\frac{3}{4}$ -open positions in addition to the usual closed, $\frac{1}{2}$ -open and open positions. Understandably, these are rather large and lead to a sizable RAM overhead.

Snares, Toms and Cymbals played with brushes and mallets

Some snares, toms and cymbals have brushed versions. Also included are some toms struck with mallets.

Kicks with felt beaters and Toms damped with duct tape

One of *BFD XFL*'s kicks is provided with a felt beater, while there is also a tom set damped with duct tape, for even more sonic flexibility.

Cymbals with edge samples and Rides with bell samples

Some of the crashes and splashes within *BFD XFL* are provided with samples of the edge of the cymbal being hit. In addition, all ride cymbals (except brushed rides) have bell samples. These extra hit types for crashes and rides are mapped to the 'Bell' trigger. Please make sure you have the latest version of *BFD* for this extra functionality.

5-piece DW Maple Tom set

The DW Maple Tom set (in normal and brushed versions) has an additional two toms which are available for download when you register your copy of *BFD XFL* on our website. To register, please visit:

http://www.fxansion.com/form-product_register.php

PERFORMANCE TIPS

Some of the Kit-Pieces in *BFD XFL* are rather huge (especially the hihats with $\frac{1}{4}$ -open and $\frac{3}{4}$ -open positions). If you have a small amount of RAM (512MB to 1GB) you will probably need to follow these guidelines in order to get these hyper-detailed Kit-Pieces running properly.

Turn on the **16 bit mode** option in the **Options** panel

This results in half the memory usage with a small reduction in quality.

Unload certain hit styles in the **Hit Options** panel

You may not require certain hit types provided within *BFD*: for example, snare flams

and drags, or hihats hit with the shank of the stick. These can be unloaded from memory via the **Hit Options** panel.

Decrease the **Max layers** value in the **Options** panel

A good way to save RAM is by reducing the amount of velocity layers by specifying a lower maximum value.

We also recommend that you look at the *BFD* User FAQ, for the latest hints and tips for *BFD* users:
